ABSTRACT

The article is devoted to the historiography of the study of the formation and development of communications in the South Aral Sea, in particular, railway and water transport. After all, the importance of communication routes is enormous, because transport is the material basis of the international division of labor, affects the location of production, promotes the development of specialization, as well as the development of integration processes.

KEYWORDS: *South Prearalie, Water Transport, Karakalpakstan, Expeditions, Communication Lines, Railways.*
