ABSTRACT

Distance learning can be very effective teaching materials with visual, auditory, audiovisual and multimedia content. Visual content maybe be v v form from text, drawings, photos, graphics and models, etc. Auditory means are oral presentation or speech, musical escort, different sounds, etc... Audiovisual content combines visual and auditory content, usually in the form of TV shows, movies or videos. Multimedia, an association text, images, sound, animation and video, and play their before O neither used very different means though v recent once per play multimedia files commonly used by a multimedia computer, storage of data on a CD or on the Internet. Using multimedia extremely important in distance learning as a lecturer usually not physically present with participants in order to grab their attention, motivate them to learn and explain v content that pupils are having difficulty understanding.
