**ABSTRACT**

*The purpose of modeling is to ensure the successful development by children of knowledge about the properties of natural objects, the world around them, their structure, the connections and relationships between them. Modeling is based on the principle of replacing real objects with schematically described objects or symbols. The model allows you to create an image of the most important aspects of the object. The article discusses the effectiveness and importance of improving the skills of preschool children to work with the model and through it to develop the child's competence.*

**KEYWORDS:** *Model, Competence, Scheme, Occupation, Educator, Pupil.*
