### **INTRODUCTION**

Thanks to the independence gained by our republic in 1991, many positive changes have taken place in our social life after that. With the political, economic and social development and foreign relations of our country with other high-developed countries, the demand for learning foreign languages and translation has risen rapidly for the last ten years.

A new stage in the teaching of foreign languages has begun in our country (Uzbekistan). The use of advanced pedagogical technologies, interactive, innovative and communicative media is required in the teaching of foreign languages. In accordance with these requirements, classrooms are equipped with stands and new information and communication technologies.

More than 51,7 thousand foreign language teachers have been trained on independence years, multimedia-textbook on English, German, and French languages have been created for classes, foreign language teaching computer programs have been created for elementary classes, more than 5000 rooms of schools, colleges and academic lyceums have been equipped with language laboratories

The need for learning foreign languages is also increasing day by day. Foreign language is divided into four aspects (listening, speaking, reading, and writing) and each of them is given different insights and skills. Educational technologies are the effective use of modern information technologies in the educational process. It also envisages improving the quality and effectiveness of education through the introduction of modern innovative technologies into the educational process. However, analysis of the existing system of organization of foreign language learning shows that educational standards, curricula and textbooks do not fully meet the requirements of the time, especially the use of advanced information and media technologies. Training is mainly conducted in traditional methods. The organization of continuous learning of foreign languages at all levels of the education system, as well as the training of teachers and the provision of modern teaching materials will need further improvement.

In today's fast-paced world, science and technology are growing rapidly. Progress in every area is

moving forward. In particular, there are significant changes in science. Delivery of each subject with the use of innovative pedagogical technologies and modern information and communication technologies is one of the main requirements of modern educational system. Teaching foreign languages largely depends on theoretical development and practical application of the teaching methods of foreign languages. The interplay of theory and practice is related to the scientific and harmony of the accepted terms. Interpretation of terms related to foreign language teaching methodology is an important factor in addressing this problem. The process of teaching foreign languages requires a specific specificity. Language learning material is a process that reflects a particular process. It requires developing students' practical skills to apply knowledge and skills in independent practice. In the classroom, the teacher is required to develop the skills of the student with different methodological approaches.

The use of modern technology in the learning process is an important factor for students to be well acquainted with and use of information and communication technologies. Teaching and learning foreign languages using modern technologies is one of the most effective methods. In the process of globalization, it is difficult to imagine our lives without the Internet. The most effective way to use it effectively in the process of learning and learning a foreign language. There is an opportunity to communicate with foreign-speaking people over the Internet. The most important issue is the introduction of modern communication technologies into the learning process, the purposeful and proper use of them, the development of a student's interest in foreign languages, and the effectiveness of teaching. This will enable the use of innovative educational technologies and increase demand. Nowadays there are several different ways of using innovative educational technologies. Using them in a broad and varied way of covering the subject in the lessons will increase the effectiveness of the lesson and increase the interest of the students in the lesson. It is envisaged to improve the efficiency of education through the introduction and implementation of innovations into the educational process. At a time when there is a great need for learning a foreign language, the effective use of modern information technologies and innovative educational technologies in the learning process will make this process more effective. The effectiveness of innovative educational technologies is because they are used correctly and effectively in the educational process.

In order for our talented young people to become mature professionals in their areas of interest, they must first have a good command of foreign languages, including English. Thus, the introduction of technology and ensuring that teaching methods meet the requirements of the time are an urgent task of teachers-scientists. Training and retraining of specialists are also important. At a time when economic, political, cultural and educational ties between our countries and the world are strengthening, our young people's interest in the life, culture, customs and languages of foreign countries is growing. Foreign languages, especially English, play an important role in the development of these relations.
