ABSTRACT

Association through the use of social technology is giving rise to a new type of gallery in a digitally connected society, where visitors may readily communicate varied views and thoughts. This introduces the concept of sharing and collaborative motivation, as well as the philosophy that underpins the communal evaluation arrangements that result from sharing knowledge and ideas. One can now actively participate in social development while also having the ability to work together to solve problems. The current research demonstrates how collectively using internet-mediated interactions has the potential to solve problems, provide excellent education for everybody, and mobilize knowledge resources and understanding to improve educational quality and learning results.
